Profile

Junior student majoring in Information Engineering at Shanghai University, with practical experience across embedded systems, intelligent vehicles, C++ software development, Python image processing, MATLAB signal processing, Linux-based operating system practice, and GitHub Actions CI/CD. I am interested in engineering-oriented problem solving, combining hardware, software, algorithms, and project management to build complete working systems.

Education

- 2023 – Present **B.Eng. in Information Engineering**, *Shanghai University*, Shanghai, China
Relevant coursework includes Machine Learning, Data Structures, Computer Networks, Embedded System Design, Electronic Technology Practice, Digital Image Processing, Signal Analysis, Operating Systems, 3D Modeling and Simulation, Project Management, Quality Management, and Enterprise Innovation Practice.
- 2020 – 2023 **High School**, *High School in Henan Province*, Henan, China
- 2017 – 2020 **Junior High School**, *Junior High School in Henan Province*, Henan, China
- 2011 – 2017 **Primary School**, *Primary School in Henan Province*, Henan, China

Selected Projects

- 2026 **Autonomous Logistics Vehicle**, *Electronic Technology Practice*, Keil5, Sensors, Servo Gripper
- Built a complete logistics vehicle capable of following a closed-loop route, reaching a target destination, recognizing object colors, and grasping objects with a servo gripper.
 - Integrated vehicle control, sensors, color recognition, servo-actuated gripping, and computer-side information feedback.
 - Practiced embedded programming, hardware debugging, motion control, sensor integration, and system-level testing.
- 2025 **Seven Wonders Duel Board/Card Game Prototype**, *Algorithms Course Project*, C++
- Developed a C++ prototype inspired by the board/card game *Seven Wonders Duel*.
 - Implemented game logic, player operations, card effects, turn flow, and console-based interaction.
 - Strengthened understanding of object-oriented programming, algorithmic logic, and medium-scale project organization.
- 2025 **Metro Route Query System**, *Data Structures Course Project*, C++ / Graph Algorithms
- Built a metro route query system supporting autonomous route search between stations.
 - Modeled metro stations and lines using graph-based data structures.
 - Practiced graph traversal, route representation, and user-oriented query design.
- 2025 **Mini Photoshop**, *Digital Image Processing Course Project*, Python
- Implemented a simplified image-processing application inspired by Photoshop.
 - Developed basic image operations and practiced Python-based digital image processing workflows.
 - Improved understanding of image representation, pixel-level processing, filtering, and practical tool design.

- 2025 **Voice Changer**, *Signal Analysis Course Project*, MATLAB
 - Created a simple voice-changing program using MATLAB.
 - Applied signal analysis concepts to audio processing, waveform transformation, and sound effect generation.
- 2024 – 2025 **Engineering Training and Electronic Practice Vehicles**, *Course Practice*, Manufacturing, Soldering, Vehicle Control
 - Assembled all mechanical parts of a complete small vehicle during engineering training.
 - Completed electronic board soldering and debugging for vehicle-related modules.
 - Implemented open-loop line tracking, obstacle detection with stop/reverse behavior, and object grasping and placement tasks.
- 2024 **Directory Synchronization Tool**, *Operating Systems Course Project*, Ubuntu
 - Built a directory modification and synchronization practice project on Ubuntu.
 - Practiced Linux commands, file management, shell workflow, and operating-system-level thinking.
- 2026 **Machine Learning CI/CD Practice**, *GitHub Actions Project*, Git, GitHub Actions, CI/CD
 - Built a CI/CD workflow that automatically runs a training script after repository updates.
 - Generated output files and published them through a release branch and GitHub Releases.
 - Practiced SSH-based Git operations, branch management, automated workflows, and release management.

Competitions and Awards

- 2025 **Special Prize, Shanghai Municipal Competition**, *College Students' Engineering Practice and Innovation Ability Competition*
- 2025 **Second Prize, University Competition**, *College Students' Engineering Practice and Innovation Ability Competition*
- 2025 **Third Prize**, *National Youth Intelligent Unmanned System Application Competition*
- 2024 **Third Prize, Provincial Competition**, *Mathematical Modeling Competition*

Leadership and Management Experience

- Team Leader Served as a group leader in courses related to Project Management, Quality Management, and Enterprise Innovation Practice. Coordinated task division, progress tracking, document preparation, presentation design, and final project delivery.
- Project Practice Experienced in connecting mechanical design, electronics, embedded control, software implementation, documentation, and presentation in course-based engineering projects.

Technical Skills

- Programming C++, Python, MATLAB, basic shell commands
- Embedded Systems Keil5, sensors, servo gripper, intelligent vehicle control, hardware debugging, soldering practice
- Tools Git, GitHub, GitHub Actions, VS Code, LaTeX, WPS Office, Ubuntu, MATLAB
- Technical Areas Data structures, graph algorithms, digital image processing, signal analysis, machine learning basics, CI/CD workflows, 3D modeling and simulation

Certificates and Languages

- Certificates CET-4; WPS Office Computer Level 2 Certificate
- Languages Chinese: native; English: technical reading and coursework communication; French: basic communication from university French courses
